

# MAINTENANCE

Operation and Maintenance of Green Infrastructure and  
Other Stormwater BMPs

## Long-Term Maintenance

- All stormwater systems require maintenance
- With traditional infrastructure often maintenance only occurs when there is failure because it is 'out of sight and out of mind'
- Most green infrastructure is visible, and considered an aesthetic amenity; it's harder to ignore maintenance needs
- Small problems are less likely to turn into system failures

## Key Reasons Why BMP Maintenance Has Historically Been Difficult to Implement

1. Inability to physically locate the management practices
2. Inability to track responsible parties
3. Dedicated staff not assigned to inspection
4. Designs not conducive to easy maintenance
5. Lack of enforcement authority and access
6. Owners are unaware of their responsibilities
7. Proliferation of management practices that require intensive maintenance
8. Insufficient funding sources

## WERF Finding

*“Probably **80% of the total man hours spent** in the field in many jurisdictions are **associated with grass mowing**, rather than the issues one might expect such as sediment, debris and trash removal, or structural repair. Of this 80%, **most of the effort has little effect on BMP performance**, but results from the level of service **expectations of residents** living near these facilities. The frequency of maintenance has been found to be dependent on the economic status of the neighborhood and the visibility of the system.”*

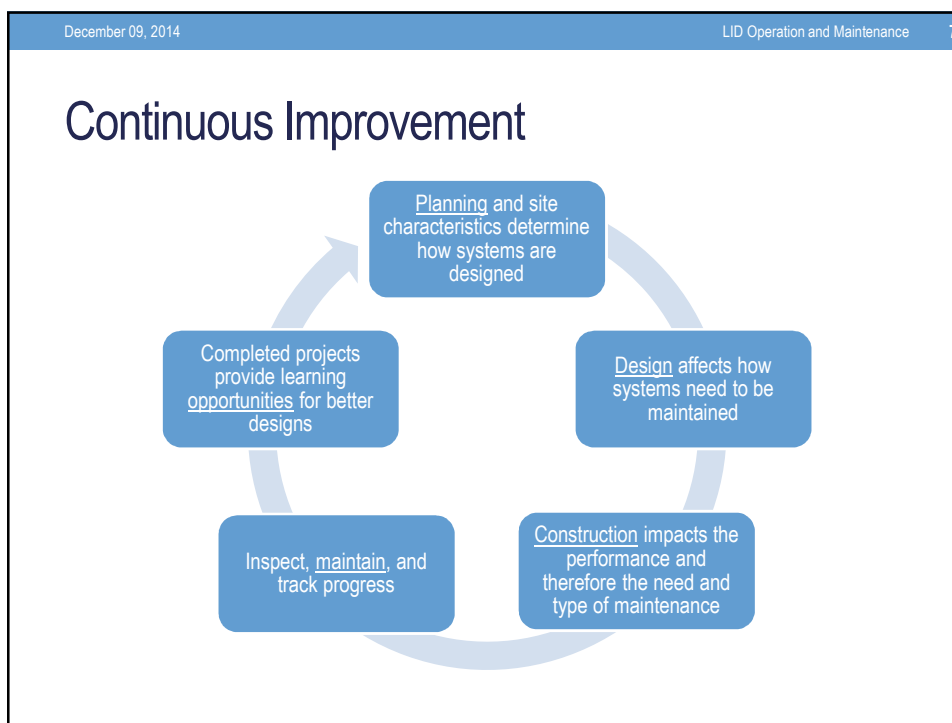

*WERF 2005 Performance and Whole Life Costs of Best Management Practices and Sustainable Urban Drainage Systems*

## Factors Affecting Performance

|                                   | Sediment Buildup | Litter & Debris | Pipe Clogging | Invasive Vegetation |
|-----------------------------------|------------------|-----------------|---------------|---------------------|
| Surface Sand or Soil Filter       | 50%              | 30%             | 10%           | 0%                  |
| Infiltration Basins or Trenches   | 36%              | 21%             | 10%           | 5%                  |
| Wet Ponds                         | 26% *            | 19%             | 21%           | 10%                 |
| Underground Sedimentation Devices | 58%              | 21%             | 11%           | 0%                  |
| Rain Gardens                      | 33%              | 22%             | 7%            | 26%                 |
| Filter Strips or Swales           | 21%              | 26%             | 5%            | 26%                 |

- \* PAH's becoming a significant concern for wet pond sediments
- Maintenance Survey of 38 cities and counties in Minnesota and Wisconsin
- Multiple-answers allowed

## DESIGN WITH MAINTENANCE IN MIND

---

Only build what you're willing to maintain

## Design

- Accessibility (ROW, easements, vehicle access, cleanouts)
- Design documentation (remove sediment when?)
- Communicate presence, function, use and specialized maintenance needs (signage, manuals, etc.)
- Help from neighbors
- Involve maintenance staff on selection and design
- Pretreatment (sediment traps, vegetative buffer, etc.)
- Anti-clogging devices (inlet/outlet)
- Infiltration tests
- Vegetation (suitable selection)
- **Maintenance Plan written as part of design**

## Assessing Bioretention Installations

- Soil Analysis
  - 82% of constructed bioretention cells failed to soil specifications
- Compared design volume with constructed volume

| Category              | % of Design Volume | % of Practices in Category |
|-----------------------|--------------------|----------------------------|
| Severely Undersized   | <-25%              | 28%                        |
| Moderately Undersized | -25% to -10%       | 22%                        |
| <b>Adequate</b>       | <b>-10% to 10%</b> | <b>17%</b>                 |
| Moderately Oversized  | 10% to 25%         | 17%                        |
| Severely Oversized    | >25%               | 17%                        |

## Impacts of Implementing an Inspection Program

Wardynski, B. and Hunt, W. (2011) *Assessing the Accuracy of Bioretention Installation in North Carolina*. *World Environmental and Water Resources Congress 2011*: pp. 347-355.

## Infiltration Testing

- During Construction
  - Infiltration rate of in situ native soil
  - Bottom of excavation
  - Purpose: if not testing during design phase, provides measured infiltration capacity of soil
- Immediately After Construction
  - Purpose: baseline measurement for future comparisons
  - Vegetated Areas
  - Permeable Pavements

## Soil Erosion during Construction

- Keep soil erosion sediment off
  - Aggregate storage reservoirs
  - Planting soil
  - Permeable pavements (all types)
- Bioretention is designed to work AFTER construction is completed and the watershed is STABLE
- Do not install if exposed soil is obvious or surrounding drainage is not stabilized
- Use standard E & S control measures to stabilize disturbed or potentially erosive surfaces for onsite and potential offsite sources

## Soil Compaction

- Level bottom preferred
- On slopes terrace the bottom or use heck dams
- Compact
  - Infrastructure subgrades and bases = **Yes**
  - In situ soil below stormwater practices typically do not (should not) be compacted before placing aggregate and/or soil overtop
  - Aggregate reservoirs = **Yes**
  - Planting soil = **No**
- Loosen and scarify soils
  - Before planting
  - Before placing aggregate or soil layer

## Substitutions and Certifications

- Check and certify before accepting
- Shop drawing submittals for all critical components
- Watch out for substitutions (e.g. plants)

### City of Los Angeles STORMWATER OBSERVATION REPORT FORM

#### STANDARD URBAN STORMWATER MITIGATION PLAN (SUSMP) - SITE SPECIFIC MITIGATION PLAN -

**STORMWATER OBSERVATION** means the visual observation of the stormwater related Best Management Practices (BMPs) for conformance with the approved SUSMP/Site Specific Mitigation Plan at significant construction stages and at completion of the project. Stormwater observation does not include or require the responsibility for the inspections required by Section 100 or other sections of the City of Los Angeles Building Code.

**STORMWATER OBSERVATION** must be performed by the engineer or architect responsible for the approved SUSMP/Site Specific Mitigation Plan or designated staff in their employment.

**STORMWATER OBSERVATION REPORT** must be signed and stamped (see below) by the engineer or architect responsible for the approved SUSMP and submitted to the city **before** the issuance of the certificate of occupancy.

|   |                      |
|---|----------------------|
| Project Address:  | Building Permit No.: |
| <b>As-Built Certification</b>   |                      |
| Name of Engineer or Architect responsible for the approved SUSMP/Site Specific Mitigation Plan: | Phone Number:        |
| Name of SUSMP/Site Specific Mitigation Plan Observer:   | Phone Number:        |

I DECLARE THAT THE FOLLOWING STATEMENTS ARE TRUE TO THE BEST OF MY KNOWLEDGE:

1. I AM THE ENGINEER OR ARCHITECT RESPONSIBLE FOR THE APPROVED SUB-SITE SPECIFIC MITIGATION PLAN, AND
2. I OR DESIGNATED STAFF UNDER MY RESPONSIBLE CHARGE, HAS PERFORMED THE REQUIRED SITE VISITS AT EACH SIGNIFICANT CONSTRUCTION STAGE AND AT COMPLETION TO VERIFY THAT THE BEST MANAGEMENT PRACTICES AS SHOWN ON THE APPROVED PLAN HAVE BEEN CONSTRUCTED AND INSTALLED IN ACCORDANCE WITH THE APPROVED SUSMP/SITE SPECIFIC MITIGATION PLAN.

Stamp of Engineer or Architect responsible for the approved SUSMP

LID Operation and Maintenance

25

## Water Runs Downhill

- Proper elevation grading is paramount
- Practice design, drainage area and runoff volume are intricately linked
- Field changes may require design changes
- Inlets must let water in

# SHORT AND LONG TERM CARE AND MAINTENANCE

---

December 09, 2014

LID Operation and Maintenance

30

## Maintenance

- **Inspect**
  - Regular intervals
  - Use checklist
  - Inlets, outlets, storage, upstream drainage area, downstream impacts etc.
  - Vegetation management
  - Infiltration
  - Sediment accumulation
  - Trash and debris
- **Track**
  - Inventory of existing practices
  - Maintenance and inspection
  - Documentation for legal action
  - Relate design to performance

[illegible]

## Typical Activities for Vegetated Systems

| Activity   | Frequency             | Time Period          | Description  |
|------------|-----------------------|----------------------|--|
| Irrigation | Weekly (min)          | First 3 months       | First 3 months during plant establishment  |
|            | Biweekly (min)        | Year 1 summer months |  |
| Weeding    | Regularly             | Year 1               | Herbicide spot application or hand pulling   |
|            | 1 to 2 times per year | Long Term            | Herbicide spot application or hand pulling   |
| Pruning    | 1 to 2 times per year | Long Term            | Trim back or remove overgrown vegetation   |
| Inspection | After large rainfall  | Long Term            | Check and clean inlets and outlets. Look for signs of poor drainage. Check and repair erosion problems. Remove trash and debris. |
|            | Annual                | Long Term            | Check and clean underdrain, exercise the valve   |
| Mulch      | Annual                | Long Term            | Refresh annually and replace every 3 years   |

## Permeable Paver Maintenance

December 09, 2014

LID Operation and Maintenance

34

## Most common concern is clogging

- Vegetative litter
  - Tree and shrub litter
  - Grass clippings
- Sediment
  - Run-on during construction activities
  - Exposed soil
  - Educate adjacent property owners
  - Winter time abrasive

December 09, 2014

LID Operation and Maintenance 35

## Street Sweeping

- Mechanical (brush approach)
- Regenerative air (shoot air at angle to pavement)
- Vacuum (demonstrated ability to suction 3 to 4 inches of gravel and dry sand)

| Pavement Type  | Clogging Depth           | Preventive Sweeper | Restorative Sweeper     |
|--|--------------------------|--------------------|-------------------------|
| Concrete Grid<br>Pavers filled with<br>sand (wide gap) | < 0.5 inches             | Mechanical         | Mechanical              |
| Interlocking Pavers<br>(narrow gap)                    | < 2 inches               | Regenerative Air   | Vacuum                  |
| Pervious concrete or<br>asphalt                        | If sand: < 1 inch        | Regenerative Air   | If Sand: Vacuum?        |
|  | If silt/clay: > 3 inches | Regenerative Air   | If Silt/Clay: not known |

LID Operation and Maintenance 36

## Maintenance

- Inspection
  - Water bottle test
  - Frequency every 2 to 4 months
- Street Sweeping
  - 2 to 4 times per year (preventative)
  - Vacuum most effective when sediment particles are dry
- Replace aggregate in paver applications as needed
- Remove unwanted vegetation
  - Herbicide and then pull
  - Burn
  - Don't let weeds persist

## WERF Whole Life Cost Model

- Spreadsheet cost estimation tool designed to estimate whole life costs of several practices
- Capital and maintenance costs
- Peer reviewed
- Customizable

**Curb-Contained Bioretention**

Choose one in the table & apply to instructions on the correct use of the spreadsheet

Site Name: Wetland Camp  
 Site Location: National  
 Date: May 2008

**Design & Maintenance Options**

**WATERSHED CHARACTERISTICS**

**DESIGN & MAINTENANCE OPTIONS**

**WHOLE LIFE COST OPTIONS**

**Method A: Simple Cost Based on Drainage Area**

| Component           | Unit  | Cost |
|---------------------|-------|------|
| Infiltration Trench | sq ft | 1.00 |
| Sand Filter         | sq ft | 1.00 |
| Wet Pond            | sq ft | 1.00 |
| Dry Pond            | sq ft | 1.00 |
| Rain Garden         | sq ft | 1.00 |
| Constructed Wetland | sq ft | 1.00 |
| Swale               | sq ft | 1.00 |
| Filter Strip        | sq ft | 1.00 |

**Method B: User-Entered Engineer's Estimate**

Site Name: Wetland Camp  
 Site Location: National  
 Date: May 2008

**Capital Costs**

| Component           | Unit  | Cost |
|---------------------|-------|------|
| Infiltration Trench | sq ft | 1.00 |
| Sand Filter         | sq ft | 1.00 |
| Wet Pond            | sq ft | 1.00 |
| Dry Pond            | sq ft | 1.00 |
| Rain Garden         | sq ft | 1.00 |
| Constructed Wetland | sq ft | 1.00 |
| Swale               | sq ft | 1.00 |
| Filter Strip        | sq ft | 1.00 |

**Maintenance Costs**

**ROUTINE MAINTENANCE ACTIVITIES (Frequent, scheduled events)**

| Activity      | Unit  | Cost |
|---------------|-------|------|
| Mowing        | sq ft | 1.00 |
| Weeding       | sq ft | 1.00 |
| Pruning       | sq ft | 1.00 |
| Tree Removal  | sq ft | 1.00 |
| Tree Pruning  | sq ft | 1.00 |
| Tree Planting | sq ft | 1.00 |

**CORRECTIVE AND INFREQUENT MAINTENANCE ACTIVITIES (Unplanned and/or 2 yrs. or more events)**

| Activity                 | Unit  | Cost |
|--------------------------|-------|------|
| Tree Removal             | sq ft | 1.00 |
| Tree Pruning             | sq ft | 1.00 |
| Tree Planting            | sq ft | 1.00 |
| Swale Maintenance        | sq ft | 1.00 |
| Filter Strip Maintenance | sq ft | 1.00 |

**HIGH, MEDIUM AND LOW MAINTENANCE COST TABLES**

| Activity      | Unit  | Cost |
|---------------|-------|------|
| Mowing        | sq ft | 1.00 |
| Weeding       | sq ft | 1.00 |
| Pruning       | sq ft | 1.00 |
| Tree Removal  | sq ft | 1.00 |
| Tree Pruning  | sq ft | 1.00 |
| Tree Planting | sq ft | 1.00 |
